It's very powerful and fast. 4. YouTube HD Video Maker for PC - Even though it's limited, I still love it. You can trim your clips, split them, add the soundtrack and combine with other videos. Its interface is very easy to use. If you are a user of iPhone, there is an iOS version which is not limited to HD quality only. 5. News4App - I'm not a huge Facebook fan, but News4App is an app that allows you to watch the latest news on the go. You can read, watch, add, comment and share the latest news. It's very quick and convenient to use. Q: Codeigniter - Check if user is logged in on page load? I am trying to check if user is logged in on the homepage in codeigniter. It is not working. I have two modules. My main module and an admin module. Main module should run on the homepage. But on the homepage I would like to check if user is logged in. If he is logged in then main module should run, else admin module should run. This is what I have in my main module: `$this->session->userdata('user_logged_in'), 'auth_user' => $this->session->userdata('auth_user'), 'admin' => $this->session->userdata('admin'), 'pwd' => $this->session->userdata('pwd'), 'welcome' => $this->session->userdata('welcome'), 'username' => 82157476af`
